Name

Description

Entry Point

▶ Step 2 - Service-Level Agreement Options

▶ Step 3 - Job Profile Parameters

Upon page load, show first accordion section in an expanded state with others in a collapsed state.

## New UI proposal to help 'simplify' development process by removal of multi-stage wizard UI.

- 1) Reduce number of screens by displaying form on one page.
- 2) Separate sections using accordion UI component. Multiple accordion sections may be open or closed at the same time.
- 3) Combine Data Preparation, Composition & Production parameter fields into one section ("Job Profile Parameters").
